

# *The New Face of MAPICS*

## Mining for Data in PowerLink

### The Power Of the 'Right Click' in PowerLink

Jim Boyer

Senior Consultant

Jim.Boyer@cistech.net

*The New Face of MAPICS*

# Introduction

- Throughout PowerLink (and Browser) 'right clicking' on a record will allow you to:
  - Retrieve information without having to open another object
  - Maintain a record or associated record
  - Format a view or subset
  - Collect information about the list
  - Set Preferences
- Utilizing the right click to 'mine' for data can be a real time saver and get you to the information you need

*The New Face of MAPICS*

# Introduction

- This session will explore:
  - The relationships between Mapics files
  - Some of the records/files where the right click can be used to retrieve data
  - Maintenance functions available for the record
  - Customizing the column in the view
  - Records where the right click can be used to invoke PowerLink settings
  - Compare function between 2 records/orders

*The New Face of MAPICS*

# Application Cards

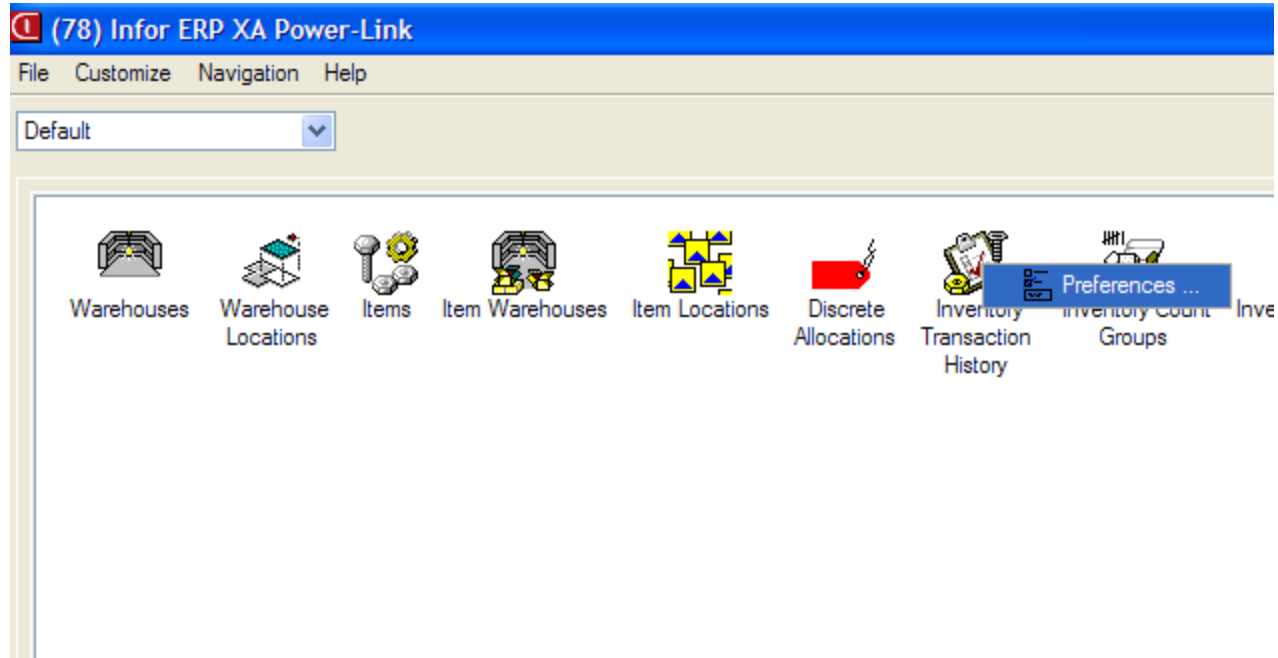

- Each object on an application card allows you to right click to set preferences
- Preferences include:
  - Default view and subset for a list
  - Default card file and active card
  - Default templates for create, change and copy
  - Files to broadcast
- Setting a default subset on large files (i.e. transaction history) will open the file quicker

*The New Face of MAPICS*

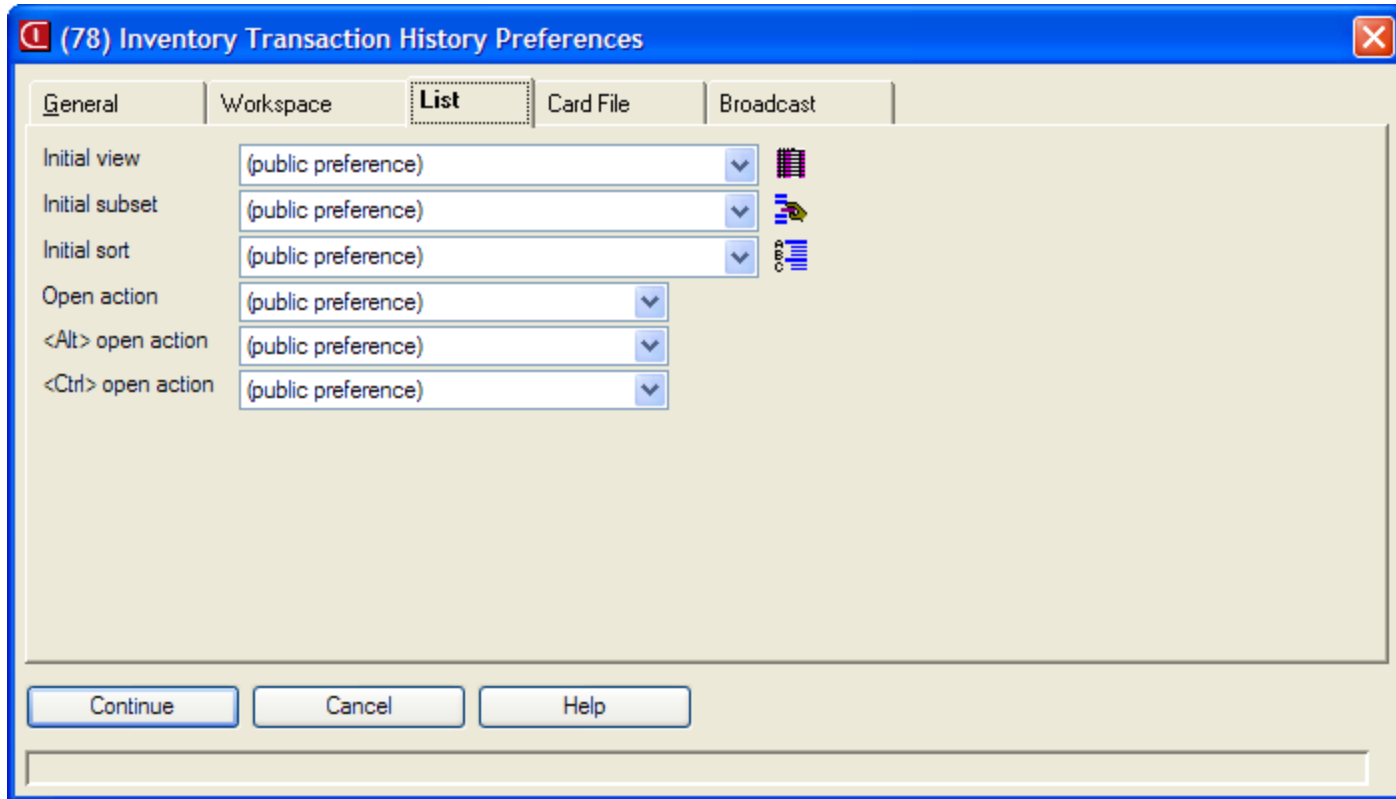

# Main Browser

*The New Face of MAPICS*

# Main Browser

# Mining for Data

- Files where the right click/Display can be used:
  - Customers to display customer orders or CO history
  - Vendors to display PO's
  - Planners to display MRP recommendations
  - Item Warehouses to display locations, MO's, PO's and CO's
  - Item Revision to display bills of material and routings

*The New Face of MAPICS*

*The New Face of MAPICS*

# Workbenches

- When a workbench is saved, there is an icon in the lower right corner that displays 4 windows
- Right clicking on that symbol will display a menu to:
  - Minimize Workbench
  - Restore Workbench
  - Close Workbench
- This makes it easy to remove the workbench windows from the desktop or restore them when needed

*The New Face of MAPICS*

# Workbenches

The screenshot displays several overlapping MAPICS workbenches. A context menu is open over the 'Item Revisions' window, listing options: 'Restore Workbench', 'Minimize Workbench', 'Close Workbench', 'Cancel', and 'Help'.
